

APEX DYNAMICS, INC.

High Performance Gearbox

MGO / MGOK Series

MGOH / MGOHK

MGOHC / MGOHCK Series

Gearbox Series - MGO / MGOK

► Features:

- Enhanced Axial and Radial Load
- Enlarged Holes on Flange for Easy Installation and Adjustment
- High Torque
- High Torsional Rigidity
- High Precision
- Long-Term Persistence of Low Backlash
- Long Service Life
- High Efficiency / Optimized Inertia Moment
- Identical Input-Output Rotating Direction with Hypoid Right-Angle K-Series

Ordering Code - MGO / MGOK Series

Efficiency η	%	1	4~10	$\geq 97\%$					
		2	16~100	$\geq 94\%$					

(1) Ratio ($i = N_{in} / N_{out}$).

(2) Backlash is measured at 2% of Nominal Output Torque T_{2N} .

(3) The values are measured by gearbox with ratio 10 (1-stage) or ratio 100 (2-stage), no loading at 3,000 RPM or at the respective Nominal Input Speed by bigger model size.
By lower ratio and/or higher RPM, the values could be higher.

(4) Applied to the output flange center at 100 rpm.

(5) Continuous operation is not recommended.

(3) The values are measured by gearbox with ratio 1,000 (3-stage), no loading at 3,000 RPM or at the respective Nominal Input Speed by bigger model size.
By lower ratio and/or higher RPM, the values could be higher.

(4) Applied to the output flange center at 100 rpm.

(5) Continuous operation is not recommended.

Inertia - MGOKA (3 Stage) Gearbox

Gearbox Series - MGOH / MGOHK / MGOHC / MGOHCK

► Features:

- Enhanced Axial and Radial Load
- Enlarged Holes on Flange for Easy Installation and Adjustment
- **Extra High Torque**
- High Torsional Rigidity
- High Precision
- Long-Term Persistence of Low Backlash
- Long Service Life
- High Efficiency / Optimized Inertia Moment
- Identical Input-Output Rotating Direction with Hypoid Right-Angle K-Series
- Standard Flange or Curvic Output

Ordering Code - MGOH / MGOHK Series

(1) Ratio ($i = N_{in} / N_{out}$).

(2) The values are measured by gearbox with ratio 5.5 (1-stage), 55 (2-stage) or ratio 220 (3-stage), no loading at 3,000 RPM or at the respective Nominal Input Speed by bigger model size.
By lower ratio and/or higher RPM, the values could be higher.

(3) Backlash is measured at 2% of Nominal Output Torque T_{2N} .

(4) Applied to the output flange/curvic center at 100 rpm. The calculation formula please refer to Fig. 1.

(5) Continuous operation is not recommended.

$$\text{Max. Tilting Moment } M_{2K} = \frac{F_{2a} * Y + F_{2r} * (X + Z_2)}{1000}$$

$M_{2K} : [\text{Nm}]$
 $F_{2a}, F_{2r} : [\text{N}]$
 $X, Y, Z_2 : [\text{mm}]$

Running Noise ⁽²⁾	dB(A)	2	4~11	≤ 68	≤ 68	≤ 68	≤ 68	≤ 68	≤ 68
Efficiency η	%	2	4~11	$\geq 95\%$					

(1) Ratio ($i = N_{in} / N_{out}$).

(2) The values are measured by gearbox with ratio 11 (2-stage), no loading at 3,000 RPM or at the respective Nominal Input Speed by bigger model size.
By lower ratio and/or higher RPM, the values could be higher.

(3) Backlash is measured at 2% of Nominal Output Torque T_{2N} .

(4) Applied to the output flange/curvic center at 100 rpm. The calculation formula please refer to page (20).

(5) Continuous operation is not recommended.

Max. Inertia - MGOHK / MGOHCK (2 Stage) Gearbox (Ratio $i = 4 \sim 11$)

Rack and Pinion for MGOH series

Advantages of Curvic Coupling

- All-Teeth-Coupling between pinion and gearbox
- Zero backlash
- Automatic concentricity
- High torque transmission
- The Round-Out of the gearbox-pinion-set can be adjusted by switching the curvic positions.
- Quick assembly and disassembly or replacement
- More suitable pinion teeth-no. can be chosen, without interference with screwing.

Rack with Helical Teeth

Quality 6 / Carbon Steel

Tooth Thickness Tolerance : -22 ~ 0 μm

Right - Hand Helical

Helical Angle $\beta = 19^\circ 31'42''(19.5283^\circ)$

Pressure Angle $\alpha = 20^\circ$

Induction Hardened and Ground

All Sides Ground

(1) Number of teeth (2) Profile modification factor (3) Diameter of addendum circle (4) Pitch circle diameter (5) Working pitch circle diameter

(6) Pitch circle length $L = \pi \times d$ (7) Curvic specification

Pinion material carburized surface hardness reached 60 HRC.

Teeth surface ground to reduce noise and improve wear resistance.

■ Table 1. The max permitted torque and feed-force of rack and pinion.

Unit	Mn	Z ⁽¹⁾	dw ⁽²⁾	F _{2T} ⁽³⁾	T _{2B} ⁽⁴⁾	M
Gearbox Model	【mm】	【】	【mm】	【N】	【Nm】	【kg】
MGOHC/MGOHCK 115	2	20	44	8,480	180	0.33
MGOHC/MGOHCK 140	3	20	66	12,900	410	0.92
MGOHC/MGOHCK 170	4	20	86.4	22,630	960	2.12
MGOHC/MGOHCK 240	5	23	122	47,465	2,895	5.19
MGOHC/MGOHCK 285	6	23	146.4	67,610	4,950	9
MGOHC/MGOHCK 320	8	21	181.5	73,410	6,540	17.5

(1) Number of teeth (2) Working pitch circle diameter (3) Maximal Feed-Force (4) Maximal Driving Torque

- In Table 1, the max. permissible torque of the curvic plate pinion and the rack is calculated under the basis of speed 3 m/s. This condition is under providing good lubrication (using the automatic lubrication system or applied grease manually every day), the tooth root strength factor $SF \geq 1.4$, teeth surface strength coefficient $SH \geq 1$, the safety factor $SB \approx 1$ and the required service life of 20,000 hours. By higher speed, the max. permissible torque reduced. The user needs to increase the safety factor for the application. Please visit APEX website (www.apexdyna.com/) for the backlash value by different center height.

Pinion with Helical Teeth (Interface : Welded Plate / EN ISO 9409-I-A)

- The maximum permissible torque of the rack

$$A = h_0 + \frac{\varnothing dw}{2}$$

- In Table 3, the maximum permissible torque of the pinion Welded Plate and the rack is calculated of the basis of a speed of 1.5 m/s and providing good lubrication (using an automatic lubrication system or manually applied grease every day), the tooth root strength factor $SF \geq 1.4$, tooth surface strength coefficient $SH \geq 1$, the safety factor $SB \geq 1$, and the required service life of 20,000 hours. By higher speed, the max. permissible torque reduced. The user needs to increase the safety factor for the application.
- Backlash changes by different center height. Please contact APEX under (WWW.APEXDYNA.COM).

(1) Number of teeth (2) Working pitch circle diameter (3) Maximal Feed-Force (4) Maximal Driving Torque

- In Table 4, the max. permissible torque of the curvic plate pinion and the rack is calculated under the basis of speed 3 m/s. This condition is under providing good lubrication (using the automatic lubrication system or applied grease manually every day), the tooth root strength factor $SF \geq 1.4$, teeth surface strength coefficient $SH \geq 1$, the safety factor $SB \approx 1$ and the required service life of 20,000 hours. By higher speed, the max. permissible torque reduced. The user needs to increase the safety factor for the application. Please visit APEX website (www.apexdyna.com/) for the backlash value by different center height.

Pinion with Straight Teeth (Interface : Curvic Plate / EN ISO 9409-I-A)

- Pinion material carburized, surface hardness reached 60 HRC.
- Teeth surface ground to reduce noise and improve wear resistance.
- Accessories include hexagon socket head cap screws (Strength 12.9 , DIN 912)
- The strength of screws is limits the max. transmission torque. Please refer to the table below :

PCD of Flange	Bolt / Screw Size	Max.Torque (Nm)
Ø50	M6 x 12 PCS	265
Ø63	M8 x 12 PCS	640
Ø80	M8 x 16 PCS	1,160
Ø125	M10 x 16 PCS	2,960
Ø140	M16 x 12 PCS	6,620
Ø160	M24 x 12 PCS	18,160

- Tightening torque recommended for bolt.

Screws	Screws tightening torque(Nm)
M5 x 0.8P	9.8
M6 x 1P	17
M8 x 1.25P	41
M10 x 1.5P	80
M12 x 1.75P	139
M16 x 2P	343
M20 x 2.5P	692
M24 x 3P	1,190

- The maximum permissible torque of the rack

- In Table 5, the maximum permissible torque of the pinion Curvic Plate and the rack is calculated of the basis of a speed of 1.5 m/s and providing good lubrication (using an automatic lubrication system or manually applied grease every day), the tooth root strength factor $SF \geq 1.4$, tooth surface strength coefficient $SH \geq 1$, the safety factor $SB \geq 1$, and the required service life of 20,000 hours. By higher speed, the max. permissible torque reduced. The user needs to increase the safety factor for the application.
- Backlash changes by different center height. Please contact APEX under (WWW.APEXDYNA.COM).

(1) Number of teeth (2) Profile modification factor (3) Diameter of addendum circle (4) Pitch circle diameter
 (5) Working pitch circle diameter (6) Pitch circle length $L = \pi \times d$

Pinion with Straight Teeth (Interface : Welded Plate / EN ISO 9409-1-A)

- Pinion material carburized, surface hardness reached 60 HRC.
- Teeth surface ground to reduce noise and improve wear resistance.
- Accessories include hexagon socket head cap screws (Strength 12.9 , DIN 912)
- The strength of screws is limits the max. transmission torque. Please refer to the table below :

PCD of Flange	Bolt / Screw Size	Max.Torque (Nm)
Ø50	M6 x 12 PCS	265
Ø63	M8 x 12 PCS	640
Ø80	M8 x 16 PCS	1,160
Ø125	M10 x 16 PCS	2,745
Ø140	M16 x 12 PCS	6,620
Ø160	M24 x 12 PCS	18,160

- Tightening torque recommended for bolt.

Screws	Screws tightening torque(Nm)
M5 x 0.8P	9.8
M6 x 1P	17
M8 x 1.25P	41
M10 x 1.5P	80
M12 x 1.75P	139
M16 x 2P	343
M20 x 2.5P	692
M24 x 3P	1,190

Pinion with Straight Teeth (Interface : Welded Plate / EN ISO 9409-I-A)

- The maximum permissible torque of the rack

$$A = h_0 + \frac{\varnothing dw}{2}$$

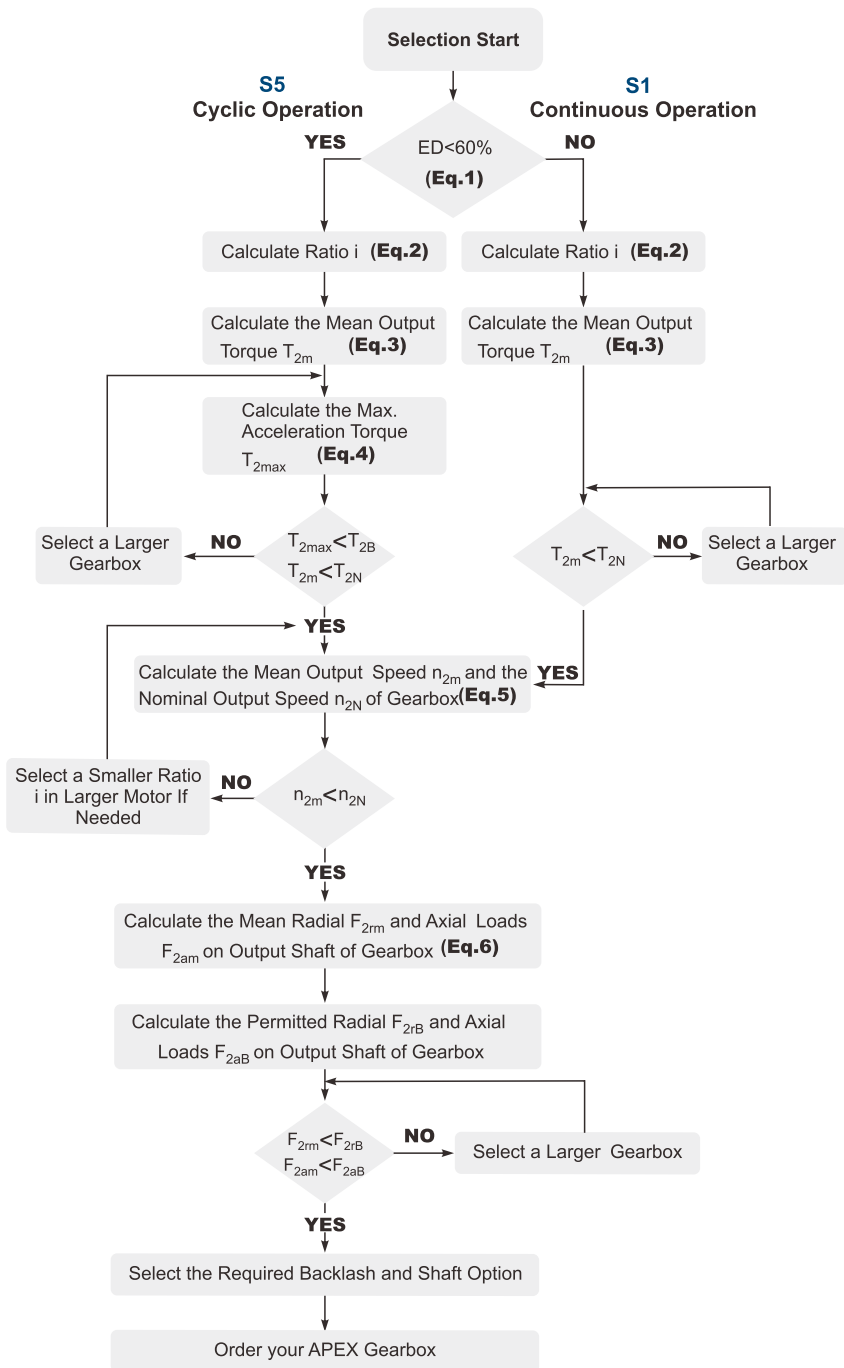

- In Table 6, the maximum permissible torque of the pinion Welded Plate and the rack is calculated of the basis of a speed of 1.5 m/s and providing good lubrication (using an automatic lubrication system or manually applied grease every day), the tooth root strength factor $SF \cong 1.4$, tooth surface strength coefficient $SH \cong 1$, the safety factor $SB \cong 1$, and the required service life of 20,000 hours. By higher speed, the max. permissible torque reduced. The user needs to increase the safety factor for the application.
- Backlash changes by different center height. Please contact APEX under (WWW.APEXDYNA.COM).

■ Table 6. The max. permitted torque and feed-force of pinion Welded Plate.

Selection of the optimum gearbox

Recommended (for S5 Cycle Operation)

The general design is given for

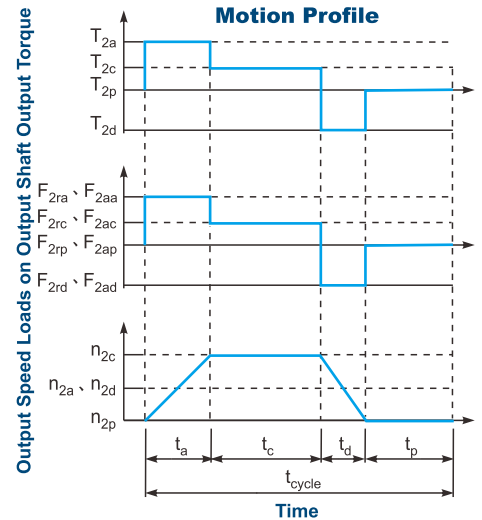

$$\frac{J_L}{i^2} \leq 4 \times J_m$$

The optimal design is given for

$$\frac{J_L}{i^2} \cong J_m$$

J_L Load Inertia

J_m Motor Inertia

$$1. ED = \frac{t_a + t_c + t_d}{t_{cycle}} \times 100\%$$

Index : a. Acceleration, c. Constant,
d. Deceleration, p. Pause

(Eq.1)

$$2. i \cong \frac{n_m}{n_{work}}$$

n_m Output Speed of the Motor

n_{work} Working Speed

(Eq.2)

$$3. T_{2m} = 3 \sqrt{\frac{n_{2a} \times t_a \times T_{2a}^3 + n_{2c} \times t_c \times T_{2c}^3 + n_{2d} \times t_d \times T_{2d}^3}{n_{2a} \times t_a + n_{2c} \times t_c + n_{2d} \times t_d}}$$

(Eq.3)

$$4. T_{2max} = T_{mB} \times i \times K_s \times \eta$$

where K_s is

K_s	No. of Cycles / hr
1.0	0 ~ 1,000
1.1	1,000 ~ 1,500
1.3	1,500 ~ 2,000
1.6	2,000 ~ 3,000
1.8	3,000 ~ 5,000

T_{mB} Max. Output Torque of the Motor

η Efficiency of the Gearbox

(Eq.4)

$$5. n_{2a} = n_{2d} = \frac{1}{2} \times n_{2c}$$

$$n_{2m} = \frac{n_{2a} \times t_a + n_{2c} \times t_c + n_{2d} \times t_d}{t_a + t_c + t_d}$$

$$n_{2N} = \frac{n_{1N}}{i}$$

(Eq.5)

$$6. F_{2rm} = 3 \sqrt{\frac{n_{2a} \times t_a \times F_{2ra}^3 + n_{2c} \times t_c \times F_{2rc}^3 + n_{2d} \times t_d \times F_{2rd}^3}{n_{2a} \times t_a + n_{2c} \times t_c + n_{2d} \times t_d}}$$

$$F_{2am} = 3 \sqrt{\frac{n_{2a} \times t_a \times F_{2aa}^3 + n_{2c} \times t_c \times F_{2ac}^3 + n_{2d} \times t_d \times F_{2ad}^3}{n_{2a} \times t_a + n_{2c} \times t_c + n_{2d} \times t_d}}$$

(Eq.6)

Glossary

Emergency Stop Torque T_{2NOT}	Nm	The Emergency Stop Torque is the maximum permitted torque at the output of gearbox. This may happen only occasionally and may not exceed 1,000 times during the whole service life.
Max. Acceleration Torque T_{2B}	Nm	Under the Cyclic Operation (S5), the Max. Acceleration Torque is the maximum torque which can be transmitted only briefly to the output of gearbox up to 1,000 cycles/hr.
No Load Running Torque	Nm	The No Load Running Torque is the min. torque to overcome the internal friction of a gearbox without loading*.
Nominal Input Speed n_{1N}	rpm	The Nominal Input Speed is the permitted input speed of gearbox by the Continuous Operation (S1) while the housing temperature does not exceed 90°C. This value is measured at environment temperature 25°C.
Max. Input Speed n_{1B}	rpm	The Max. Input Speed is the max. permitted input speed of gearbox by the Cyclic operation (S5). This value is measured at environment temperature 25°C and serves as the absolute limit of the gearbox.
Backlash	arcmin	<p>The Backlash is the maximum angular measurement between two teeth of gears when the transverse operation occurs (refer to Diagram 1). The arcmin is the measurement unit for the backlash. One arcmin equals 1/ 60 degree, symbolized as 1'.</p>  <p>Diagram 1</p>
Torsional Rigidity	Nm/arcmin	<p>Torsional Rigidity is the quotient ($\Delta T / \Delta \theta$) between the applied torque and resulting torsion angle. This value indicates how much torque is needed on the gearbox to rotate the output shaft for 1 arcmin. The Torsional Rigidity can be determined by Hysteresis Curve.</p> <p>Hysteresis Curve When the input shaft is locked, increase torque at the output slowly up to T_{2B} in both directions and then release the torque gradually. According to the measured torque and torsion angle, a closed curve will be acquired as in the Diagram 2.</p>  <p>Diagram 2</p>
Radial Load And Axial Load	N	<p>The permitted radial and axial loads on output shaft of the gearbox depend on the design of the gearbox supporting bearings.</p> <p>For more information, please refer to APEX website.</p>  <p>F_{2r} Radial Load F_{2a} Axial Load</p>
Efficiency η	%	The transmission efficiency of the gears inside a gearbox (without friction).
Operating Temperature	°C	The Operating Temperature indicates the temperature of gearbox housing.
Degree of Protection		IP code stands for International Protection standard. The IP67 as example: the first IP number stands for protection degree against dust; the second IP number stands for protection against liquid.
Lubrication		APEX uses synthetic lubrication grease. Alternate greases are available, please contact APEX.
Running Noise	dB(A)	The Running Noise is measured depends on gearbox size, the ratio and the speed*. Higher speed usually induces higher noise level, while higher ratio induces lower noise level.
Moment of Inertia J_1	kg.cm ²	The Moment of Inertia J1 is a measurement of the effort applied to an object to maintain its momentary condition at rest or rotating.
Breakaway Torque	Nm	The Breakaway Torque is the minimum torque to start the rotation from the input side of gearbox. A smaller size or a higher ratio gearbox requests less Breakaway Torque.
Back Driving Torque	Nm	The Back Driving Torque is the minimum torque to start the rotation from the output side of gearbox. A larger size or a higher ratio gearbox requires greater Back Driving Torque.

* This value is measured at environment temperature 25°C and the input speed 3,000 rpm. If the Nominal Input Speed n_{1N} of gearbox is lower than 3,000 rpm, this value is measured by that specific Nominal Input Speed.
