Lubrication System Example of Application

(1) Using in the main tube of lubricator, the total length of 5m (inclusive) recommended PA tube, total length > 5m recommend a flexible tube.

(2) Using a dispenser of the PA tube is suitable $\phi 4, \phi 6$ PA tube. When the total length of PA tube $< 1\text{m}$ and recommended $\phi 4$ PA tube, when the total length $> 1\text{m}$ and recommended $\phi 6$ PA tube.

(3) Both provide in-line connector option and right-angle connector option for flexible tube and PA tube.

 PIN 4 : Input 24V DC
 PIN 5 : GND

- Hand-Set Controller (Order Code : EC01)

After set-up of lubricator, the Hand-Set Controller can be removed.
 Please also refer to Manual of Installation.

Lubrication of Rack & Pinion

- As transmission devices, Rack and Pinion are often exposed to air and may oxidized. It's highly recommended to use APEX PU Lubrication Pinion to perform greasing and uniform distribution of lubricant on all teeth surfaces.
- Open-Cell Polyurethane Foam of PU Lubrication Pinion can absorb a certain amount of lubricant. Standard Involute Teeth Design can fit perfectly the teeth of Rack and Pinion without any loading by lubrication. Under long-time operation condition, PU Lubrication Pinion provides an automatic lubrication process on transmission devices to reduce wearing, but no overlubrication.
- First soak PU Lubrication Pinion in lubricant to allow an immediate application. The Feeding Rate of lubricant depends on Module No. and Speed, can be adjusted by controller.

Please also refer to Table I below showing Lubricant Volume vs. Module No..

Table I

PU Lubrication Pinion

Effective Lubrication can be achieved through the use of APEX Lubrication System especially for Rack and Pinion. For uniform distribution of lubricant over rack surface, it's recommend to use a driving Pinion to allow evenly greasing.

Distributor

Distributor supports up to 4 lubrication positions. Remark for operation:

- The distance between Distributor and Lubricator outlet should be kept as short as possible.
- Install only one distributor at outlet, do not connect distributors in series.
- The pressure difference between all lubrication outlets should not exceed 8 bar.
- To use PA tube with same cross-section and similar length.

According to required diameter, choose connector.(E.g.: SPLS-8 series is to select for Pipe diameter 8 mm).

Supporting standard grease NLGI 2.

Temperature range +10°C~+60°C.

Pressure difference of outlets may result in different grease delivery volume.

Progressive Flow Distributor

Progressive flow distributor supports multiple lubrication positions successive in the pumping cycle. The output volume by each outlet is 0.15ml.

- Grease is to be apply.
- Supporting max 14 outlets
- Supporting Ø4 and Ø6 in-line and right-angle connector
- Max. permitted pressure 100 bar

Flexible Tube Set

To used for main lubrication pipe line. The spring is protecting tube, preventing the pipe line expansion due to high pressure and influence of pumping of grease.

- The max length about 15 meter
- The max permitted pressure 100 bar
- Spring is coated with nickel plated and corrosion resistance.
- Operating temperature $-30^{\circ}\text{C} \sim +80^{\circ}\text{C}$

8	35	57.3	37.3	M22 x 2.0	35	14	TB-8-22

The oil filling connector is to apply for refilling of lubricant.

High kinematic viscosity of lubricant will reduce the pumping distance to the device or facility.

Pay attention to kinematic viscosity by refilling of Non-APEX lubricant.

Lubricator Cartridge

- **Empty Cartridge (Order code : G00)**

For Self-Filling of grease.

Oil Filling Connector is necessary

Supports LUG-400 lubricator

- **Food Grade Grease (Order Code : G02)**

NLGI Grade 2

Temperature Range -35 °C~+120°C

NFS HI license.

Provide good wearing resistance and extend lubrication interval.

Food Grade Grease is Non-toxic, Odorless, Colorless and tasteless.

Kinematic Viscosity 50 cSt/40 °C

Supports LUG lubricator pre-fill at 400 cm³

- **Low Temperature Grease (Order Code : G03)**

NLGI Grade 2

Temperature Range -50 °C~+120°C

Contains special additives for anti-wear, anti-corrosion and high pressure resistance.

Suitable for high loading gear transmission system.

Kinematic Viscosity 15 cSt/40 °C

Supports LUG lubricator pre-fill at 400 cm³

- **Standard Grease (Order code : G04)**

NLGI Grade I

Temperature Range -15 °C~+130°C

Good performance in high pressure and metal adhesion.

Suitable for high loading gear transmission system.

Suitable for high temperature environment.

Kinematic Viscosity 180 cSt/40 °C

Supports LUG lubricator pre-fill at 400 cm³

PA Tube

Type of Grease	D1	D2	Length in Package (meter)	Order Code

Standard Grease (Order Code : G04)	4	2.5	5	T04-04
	6	4	10	T06-04
	8	5	10	T08-04

PA 12 Tube is pre-filled with grease.

Operating Pressure: 25 kg/cm² by 4 mm PA Tube; 28 kg/cm² by 6 mm & 8 mm PA Tube (Temperature 20°C)

Operating Temperature : -40°C ~ +80°C

It's PA tube. The maximal WORKING length of the PA tube is depending on the tube diameter and the viscosity of grease inside. The guaranteed working length is (in meter):

Grease	Tube	T04	T06	T08
Food Grade Grease (G02)		5m	5m	10m
Low Temperature Grease (G03)		5m	10m	10m
Standard Grease (G04)		5m	10m	10m

Using the flexible tube set, the pumping volume of the grease will be more precise due to the non-expansion of the tube under high pressure.
